GymPulse - Incomplete & Not Verified Items Report

Report Generated: Sep 28, 2026
App Version: GymPulse v0.1.0
Status: Issues Found
---
1. TypeScript Compilation Errors

The following TypeScript type errors prevent a clean `tsc --noEmit`:

`scripts/recalculate.ts`

1. **Line 4, Col 16**: `Expected 1 arguments, but got 0.` - Function missing required argument
2. **Line 16, Col 16**: `Type '"active"' is not assignable to type 'EnumMemberStatusFilter<"Member"> | MemberStatus | undefined'.` - Enum value mismatch
3. **Line 23, Col 16**: `Type '"completed"' is not assignable to type 'EnumPaymentStatusFilter<"Payment"> | PaymentStatus | undefined'.` - Enum value mismatch
4. **Line 25, Col 26**: `'totalRevenue._sum' is possibly 'undefined'.` - Possible null reference
5. **Line 25, Col 26**: `'totalRevenue._sum.amountPaisa' is possibly 'null' or 'undefined'.` - Possible null/undefined reference
6. **Line 36, Col 9**: `Object literal may only specify known properties, and 'checkIn' does not exist in type 'AttendanceWhereInput'.` - Invalid property in type

`tests/owner-dashboard-v2.test.ts`

7. **Line 47, Col 37**: `error TS18046: 'err' is of type 'unknown'.` - Error variable type not narrowed
8. **Line 97, Col 42**: `Operator '>' cannot be applied to types 'Promise' and 'number'.` - Promise not awaited
9. **Line 98, Col 50**: `Operator '>' cannot be applied to types 'Promise' and 'number'.` - Promise not awaited
10. **Line 99, Col 40**: `Operator '>' cannot be applied to types 'Promise' and 'number'.` - Promise not awaited
11. **Line 110, Col 41**: `Operator '>' cannot be applied to types 'Promise' and 'number'.` - Promise not awaited
12. **Line 133, Col 42**: `Operator '>' cannot be applied to types 'Promise' and 'number'.` - Promise not awaited

Total TypeScript Errors: 12 issues across 2 files
---
2. Not Verified Items (from COMPLETION_CHECKLIST.md)

The checklist claims 0 open items and 481/481 tests passing, but the following were **not verified**:

A. Real Device Testing

- iOS Safari performance and compatibility
- Android Chrome performance and compatibility
- WebGL performance on low-end phones (the app includes 3D Himalaya range with travelling pulse)

B. Live Provider Integration (Sandbox Only)

- **eSewa**: Live provider connection not tested (sandbox/console transports only)
- **Khalti**: Live provider connection not tested (sandbox/console transports only)

- **SMS**: Live SMS provider not tested (Nepal support configured in sandbox only)

C. Dynamic Page Axes Testing

The following dynamic pages were checked for status and console errors, but **not by axe (WCAG)**:
- Member pages (member/, import/, forecast/, gym/, ticket detail)
- These pages have interactive elements that may have accessibility issues not caught by the static 228-page view audit
---
3. Test Environment Issues

Playwright Test Failures

3 test files fail to run due to `test()` being called in unexpected context:
- `tests/owner-login.test.ts`
- `tests/owner-dashboard-v2.test.ts`
- `tests/owner-dashboard-comprehensive.test.ts`
Cause: Configuration or import issue with @playwright/test version compatibility. These are test infrastructure issues, not app functionality issues.
---
4. Summary

Category	Count
TypeScript compilation errors	12
Not verified real devices	3 areas
Not verified live provider integration	3 providers
Not verified dynamic page accessibility	5 pages
Playwright test infrastructure failures	3 files

Overall Status: The app's completion checklist shows all items marked complete, but there are 12 TypeScript errors, 3 Playwright test infrastructure issues, and several areas that were not fully verified (real devices, live providers, dynamic page accessibility).

This report was generated based on the COMPLETION_CHECKLIST.md, TypeScript compilation output, and test execution results.
